Lubrication of Instruments

Instruments must be lubricated regularly to increase the life time of instruments. It should be carried out daily or at least on a weekly basis. Prior to sterilisation, instruments must be lubricated. Lubricants designed specifically for precision hinged instruments should be used. Make sure to use lubricant that is well-suited with the operating temperature of your dry heat unit if dry heat steriliser is being used.

Sharpening of Instruments

Regular sharpening of instruments for example cutters will enhance their service life and increase their ability to cut more effectively and efficiently. NEXTEDGE SURGICAL recommended frequency of sharpening the cutters depends on how frequently you use them and also the diameters and type of wires in which the cutter is being used frequently. Cutters must be assessed regularly if sharpening is required.

Corrosion

All of the instruments manufactured by NEXTEDGE SURGICAL are highly resistant to corrosion. Following care recommendations and maintenance tips can be followed to further prevent corrosion problems. Corrosion If discoloration is not in the instruments do not be corrosion. Sometimes it is discoloration not a metal danger; instruments during use can give the appearance of corrosion or can be mistaken for rust.

- An orange-brown stain is normally a phosphate layer caused by water sources, sterilisation solutions or cleaning detergents.
- A black stain is normally an acidic reaction caused by detergents.
- A dark brown stain is usually caused by dried blood residues.
- A blue-black stain is usually plating caused by autoclave cleaning materials.

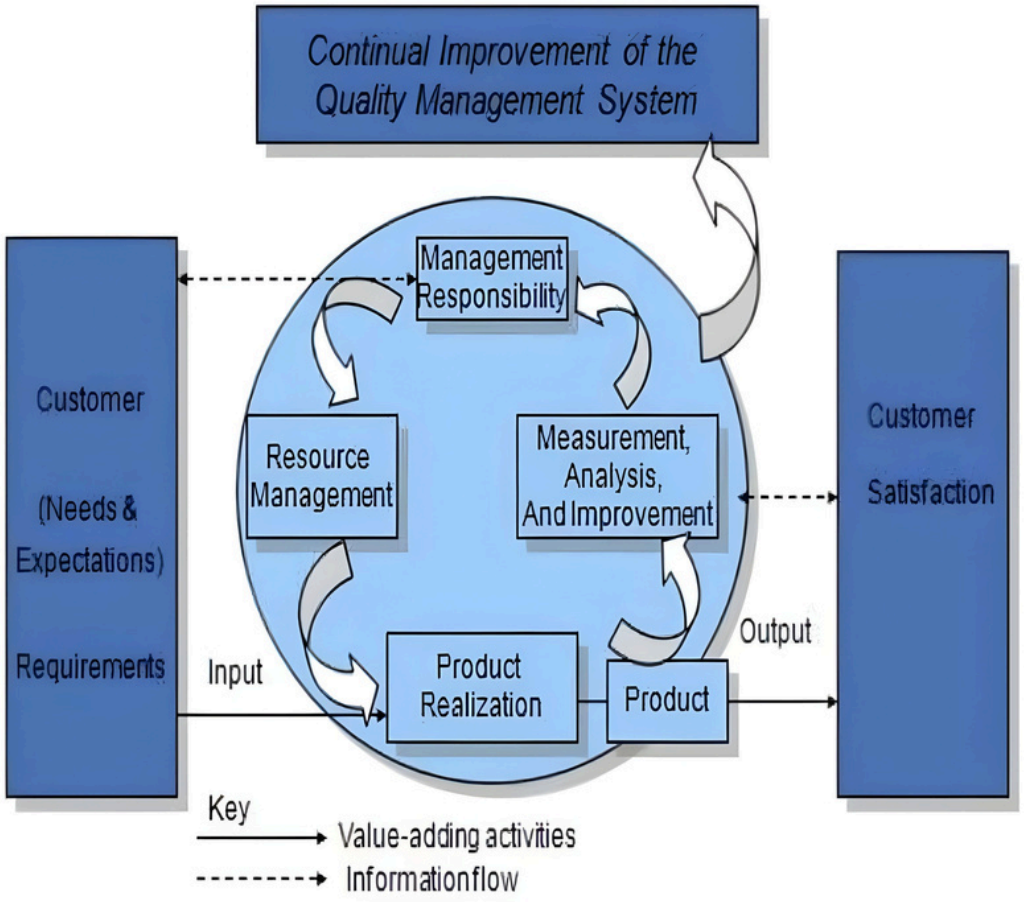
Stained instruments should not be mixed with non-corroded instruments as it may multiply the process of oxidation. We strongly recommend discarding or replacing the corroded instruments immediately.

Prevention of Corrosion

Corrosion can be an issue with any stainless steel instrument. Stainless steel requires oxygen to form a chromium oxide surface layer, which prevents it from corrosion. Bonding agents, organic residue and water droplets left on the instruments prevents oxygen to come in contact with the surface of the instrument and forming this protective layer.

Quality Management System

The quality policy is the main guiding principles that provide the focus of quality to the whole organization and improve the effectiveness of the quality management system.



Quality Begins With People Who Care

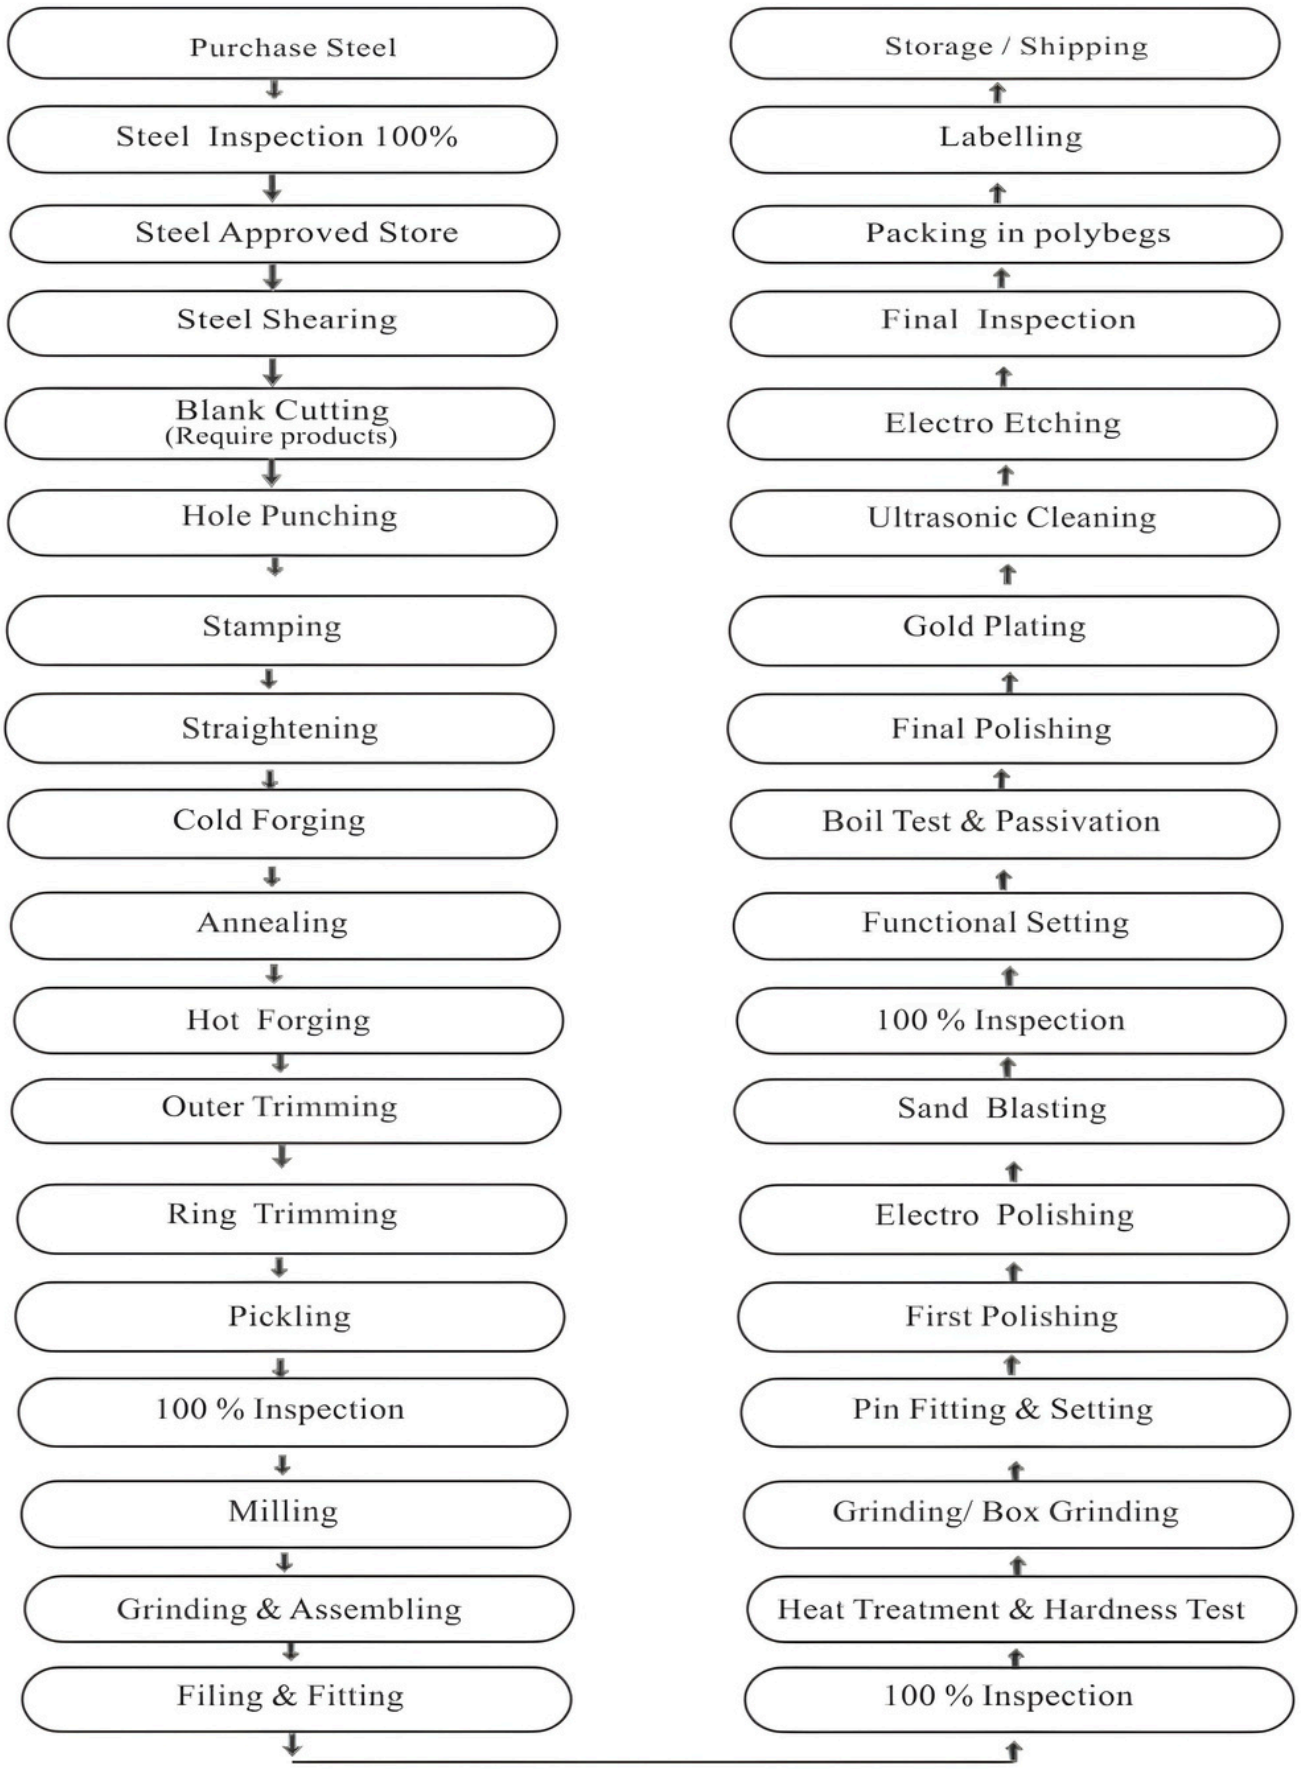
PROCESS FLOW CHART



Manufacturing Capabilities Of NEXTEDGE SURGICAL

All of our production departments are well equipped with the latest machinery which is imported from Germany and England and are well-staffed with the expert technicians.

Raw Material Department

NEXTEDGE SURGICAL always purchases the best quality stainless steel raw material from steel suppliers or imports directly from **Japan**, **France** and **Germany** when needed. Different grades of stainless steel for example **(303, 304, 410, 420 & 440)** are used in the production of our Surgical & Dental Instruments.

At NEXTEDGE SURGICAL, we believe that quality can only be achieved through quality raw material. As such, the best quality raw-materials (Stainless Steel Strips, Round Bars, Stainless Steel Coils and Stainless Steel Tubes) are purchased and are subjected to composition and hardness testing through our in-house laboratory in order to ensure that only the best materials are passed on to production departments.

ASTM Standards

NEXTEDGE SURGICAL follows the complete set of guidelines issued by the standards during the manufacturing process of instruments. Following are the set of standards that we follow:-

1. **NEXTEDGE SURGICAL** acquires premium quality stainless steel for the manufacturing of Surgical & Dental Instruments as per **ASTM Standard F899-95 and ISO 7153.**
2. Descaling and cleaning of stainless steel in conformity to **ASTM Standard A380-99.**
3. Passivation of Surgical & Dental Instruments in conformity to **ASTM Standard B967-05.**
4. Corrosion of Surgical & Dental Instruments in conformity to **ASTM Standard F1089-02.**
5. Electro-polishing of Surgical & Dental Instruments in conformity to **ASTM Standard B912-02.**
6. As different instruments are manufactured with different grades of stainless steel. We mostly use the stainless steel type **AISI-303, AISI-304, AISI-410, AISI-420, and AISI 440** series with defined specifications as per customer's requirements. Therefore, in order to select the proper grade of stainless steel, various processes are followed according to the guidelines and conformity of **ASTM Standards.**

Terms and Conditions Of Business

Company's Agreement

NEXTEDGE SURGICAL believes in the highest moral values and business ethics. Once a contract is made with a customer, we strongly aim at following it in its true spirit regarding the quality of product, packing, delivery time or any other particular need of the importer.

Minimum Orders

We require a minimum order of US$ 500.00 to process a delivery.

Payment Terms

With new customers, we require an advance payment of 100% for first six months. However, credit terms can be arranged according to the importers requirement after 6 months.

Freight & Shipping

NEXTEDGE SURGICAL provides different methods of delivery as per customers demand:

1. By Air
2. By Sea
3. By Courier

Freight and shipping charges may be added to the invoice depending upon the nature of delivery unless otherwise stated by the importer. We deliver both C&F and FOB shipments.

Returns Policy

A great deal of effort is made on packing your order with great care. Please inspect the instruments thoroughly for any loss or damage immediately upon delivery of products and file claim if products are found damaged. Concealed loss or damage must be reported within 5 days upon receipt.

CARE, HANDLING AND STERILISATION OF INSTRUMENTS

NEXTEDGE SURGICAL Approved Sterilisation Methods

We recommend steam autoclave and ethylene oxide (ETO) sterilisation methods. Steam autoclave is a highly efficient method of sterilisation which will not dull sharpness of instruments. If steam autoclave and ethylene oxide methods are not available, dry heat and chemical vapour methods are also recommended. We don't approve chemical sterilisation methods. These methods destroy instruments quickly and if used will eventually invalidate the warranty of your instruments.

Sterilisation Advice

Instruments should be dry before sterilising and in the open position when sterilised. Instrument trays should never be overloaded. Sterilising units must be cleaned and functioning properly. Autoclaves have high levels of moisture and can be damaging if not in good working order. Purified, distilled water must be used in autoclave sterilisation units. We don't recommend using tap water. It contains minerals which can cause corrosion and discolouration of instruments. Take out the instruments from the autoclave immediately after cooling when the sterilisation cycle is completed. Ensure that all tips are kept or held open to ensure proper sterilisation as this may cause corrosion. Before putting the instruments away, air-dry or use silicon based lubricant.

Cleaning of Instruments

Always clean the instruments thoroughly in order to enhance the life span of your instruments. Bulk debris should be removed immediately after use. We recommend enzymatic cleaning solution in an ultrasonic cleaner to clean the instruments. Ultrasonic solutions must be changed on a daily basis. Instruments with hinges must be cleaned in an open position. Oxidation and discolouration may occur if instruments are not thoroughly cleaned. Always use disinfectants and detergents which are suitable for use with Surgical & Dental instruments. With regards to the concentration and length of exposure, detergent manufacturer's instructions should be followed strictly.

Never use a saline solution or saline-containing instruments. It contains minerals which can cause corrosion and discolouration of instruments. Tap water can also neutralise the rust inhibiting and lubricating solution.

NEXTEDGE SURGICAL Recommends The Following Steps To Prevent Corrosion

1. Prior to the sterilisation of instruments, all residual matter must be cleaned thoroughly.
2. Instruments must be sterilised in an open position.
3. Instruments must be properly air or towel dried. Specifically take care of the joint areas and hinges.
4. Corroded instruments should never be sterilised with non-corroded instruments as it may permanently transfer the iron oxide on the corroded instruments to the non-corroded instruments.

NEXTEDGE SURGICAL Final Recommendations

1. All RE-USABLE instruments are delivered in NON-STERILE condition and must be cleaned, lubricated and sterilised before every use.
2. All instruments should be disinfected and cleaned immediately after use with disposable cloth/paper/ wipes etc.
3. If the instruments come into contact with blood, tissue, physiological saline or other foreign substances, they should be rinsed with warm (not hot) water before placing them in the ultrasonic bath.
4. We recommend use of saline free and water repellent.
5. Ultrasonic cleaning is recommended.
6. For effectiveness, first clean any residue off the instruments before placing them in ultrasonic cleaner.
7. After cleaning, all instruments should be dried immediately.
8. Treat all instruments with oil which is considered as being physiologically safe (paraffin oil), especially their ends, ratchets, and moveable parts.
9. Instruments can be disinfected in Thermal Washer disinfectors.
10. For the disinfection and cleaning of Titanium and Aluminium Instruments, only use the substances that are particularly suggested for Titanium and Aluminium Instruments.
11. For instruments manufactured with autoclavable plastic, place them in the middle of the chamber to avoid the overheating of plastic and not along the walls of the chamber. We recommend sterilising these instruments by putting them in "Self Sealing Sterilisation Pouches".
12. Do not leave instruments in cleaning or disinfecting solutions for a long time (over night or weekend) otherwise instruments can be damaged.
13. All instruments should be visually inspected for damage or breakage.
14. It is the user's responsibility to take proper care of the instruments.
15. We recommend laying down all instruments in their primary packaging.
16. Vacuum autoclave (Steam) is performed at the temperature of 134 °C.
17. If instruments are dry heat (hot-air) sterilised, the temperature should be between 180 °C to 190 °C.

Maintenance of instuments

NEXTEDGE SURGICAL always recommend to follow proper handling, care and sterilisation methods in order to increase the life span of your instruments in order to make sure they perform the best that they can

Note: Always Use The Cleaning & Disinfection Solutions/Substances That Are Particularly Suggested For Specific Type & Category Of Instruments And Follow The Manufacturer Instructions.
